

Make Your Own Log Flume!

You will need: 1 large piece of cardboard
1 medium piece of cardboard
1 small piece of cardboard
scissors
water
wood sticks

Step 1:

Fold all the pieces of cardboard in half and wrap foil around the center part of your log flume for water protection.

Step 2:

Cut out diamond shaped pieces from the center of the small and medium parts.

Step 3:

Place them on the ground and insert the center part of the log flume model into the cut-out space.

Step 4:

Place a stick in the crease of the center part of your model and run water through it. If the stick moves down, your model is working and is able to transfer sticks from the top to the bottom.
